

HTML5 Developer

Since 1994, Second Story has conceptualized, designed, and developed interactive media experiences in diverse formats that enchant, inform, and entertain—pioneering ever more effective ways to inspire wonder and connect audiences to ideas and information.

We are looking for developers that are experienced in building innovative interactive applications and experiences using the collections of technologies commonly referred to as HTML5.

The HTML5 developer is an accomplished professional who is passionate and knowledgeable about the opportunities modern Web UI frameworks provide to build informative, useable, and inspiring experiences.

In our process the developer informs the designer’s creative vision, builds prototypes to prove concepts, creates development plans, and implements the architecture and executes the code to ultimately translate designs into engaging interactive interfaces. Our ideal candidate is:

- An **effective communicator** that successfully collaborates with designers, producers, developers, engineers, fabricators, and contractors.
- An **experienced Web developer** well versed in advanced JavaScript programming, building dynamic user interfaces, translating wireframes, designs and motion studies to standards compliant HTML and CSS.
- A **driven innovator** with experience using Web technologies on mobile platforms; a tinkerer that likes to try different approaches.
- A **usability advocate** working with team members to ensure an inspiring and useable end product that is successful for diverse audiences across multiple browsers and platforms.
- A **practical, pragmatic innovator** whose solutions elicit responses that justify the effort and expense.

This is a contract position. Please send your resume and your portfolio to careers@secondstory.com.
