

Web Developer

Second Story seeks an experienced Web developer to build the databases, Web services, and content management systems that drive the studio's various interactive projects. The Web developer is passionate and knowledgeable about building reusable server-side frameworks based on Open Source Web technologies and programming practices including PHP, MySQL, Python, and Agile development.

As a core member of the project team the Web developer collaborates with designers, producers, and production coordinators to inform the projects' content management and database trajectory, including documenting, architecting, importing, managing, and developing systems and solutions that manage, serve, and maintain the content through Web based technologies. The Web developer must be:

- An **effective communicator** that successfully collaborates with designers, producers, developers, engineers, fabricators, and contractors.
- An **experienced Web developer** well versed in object oriented programming with PHP5 and/or Python, experience using frameworks like Symfony / Django, and experience building dynamic data driven Web sites using HTML/CSS and JavaScript libraries such as jQuery.
- A **driven innovator** with experience in various and diverse types of Web technologies on different platforms; a tinkerer that likes to try different approaches.
- A **practical, pragmatic innovator** whose solutions elicit responses that justify the effort and expense.

This is an exceptional opportunity for a rewarding career to inform, inspire, educate, enchant, and entertain—as opposed to brand, market, and sell—audiences through diverse projects for significant and influential cultural institutions. This position is located in Portland, Oregon, with a very competitive, comprehensive salary and a benefits package that includes medical, dental, disability, employer-contributed 401(k), and professional development funds. Please send your resume and your portfolio to careers@secondstory.com.

Since 1994, Second Story has conceived of, designed, and developed hundreds of award-winning interactive media experiences in diverse formats that pioneer ever more effective ways to inspire wonder, connect audiences to ideas and information, and 'elevate the art of storytelling.'
